Description

The 'Digital' revolution has arrived in miniature!!

You can now enjoy the holding power and accuracy benefits of 'Digital' in the smallest of models.

Even the tiny S44D can deliver 1.25kg/cm of torque and a 0-60° transit time of just 0.10 seconds. If you don't mind that little extra weight (only about 0.8g) you can have metal gears as well.

These are absolutely ideal for the light foam indoor models like our Phase 3 range but have other applications such as converting free flight designs to R/C as well.

Specifications
